DETAILED ACTION

IDS

The applicant is requested to submit the prior art as disclosed in paragraph [0006] of this application.

Election/Restrictions

Applicant's election with traverse of claims 1-17 in the reply filed on 10/27/06 is acknowledged. The traversal is on the ground(s) that see election of 10/27/06. This is not found persuasive because the searches for the device and process inventions are not co-extensive so separate searches have to be made.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 recites the limitation "the drain electrode" in line 7. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2814

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over the applicant's admitted prior art (AAPA) of this application.

With respect to claim 1, AAPA teaches a method of manufacturing a thin film transistor array panel, the method comprising (see pages 1 and 2 of this application):

- Forming a gate conductor on an insulating substrate;
- Forming a gate insulating layer;
- Forming a semiconductor member;
- Forming a data conductor; and
- Forming a pixel electrode connected to a drain electrode.

AAPA appears to teach forming the gate conductor, the data conductor, and the pixel electrode are formed by etching using different etchants and conditions.

However, it would have been obvious to one of skilled in semiconductor art to form the gate conductor, the data conductor, and the pixel electrode by etching using single etchant or one etchant to reduce processing steps and processing material to thereby reduce production cost.

Allowable Subject Matter

Claims 2-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 15-17 are allowed.
